

A.R Watson and Associates are property development consultants. They initially approached **Pro Computer Services**

with issues related to computers not working satisfactorily.

Pro Computer Services

removed a number of viruses and spyware elements, optimised system software and generally improved performance of their PCs.

PCs were reconfigured to allow data to be separated from operating software. Anti-virus and spyware software was installed and a backup solution was implemented to ensure data was secured in future.

Although system performance has been satisfactory since initial reconfigurations **Pro Computer Services**

has since carried out system audits to ensure performance levels are maintained.

A wireless network was added to allow backup of files between computers and allow resource sharing between computers, shared resources are:

- Internet
- Printers
- Storage space for backup
